This study focuses on how Chinese business organization, practice, and success have been interpreted in the historical literature. By introducing various interpretations of China's economic development (including the impact of the West, modernization, and Marxist, Weberian, and revisionist approaches), as well as Western business history theory, the book establishes a basis for constructing an appropriate framework for future research.

This book challenges the traditional models of modern economy, business education and management, which are devoted to the concepts of scarcity, competition, growth and yield. It deconstructs the spiral of acceleration in which technological shifts concerning global markets and enterprises produce a dynamic of unbridled disruption, concentration and erosion of human and natural resources. The book analyzes how, in the face of this dynamic, once successful business models increasingly lead to existential jeopardy. The book embeds its argument in the impact of technological change on strategy in general. It subsequently analyzes the degree of rationality in the strategy building process and juxtapose revenue and responsibility as the fundamental principles of diverging strategic concepts. In its central chapters the book explores the benefits of consciousness-driven business models and value-added strategies for the awareness markets of the future and their impact on team excellence and resource handling. It develops an understanding of how corporations can function as ecosystems – fostering the growth and development of the resources they operate on rather than being based on their exploitation. Understanding this structure of viable future business models is the overall theme of this pioneering book. “This book endeavors to set out yet another paradigm for a viable economics, the paradigm of ethics. It seeks to replace the concepts of competition, scarcity and growth with strategies and business models based on resource creation, added values cycles, enrichment and symbiosis in line with the awareness economy it describes.” Hunter Lovins, President and Founder of Natural Capitalism Solutions “a very basic paradigm shift in our future strategies” Henner Klein, Chairman Emeritus A.T. Kearney “The book stands right on the tectonic fault line between our old and our new reality. It manages to do both: analyze the shifting paradigms and provoke new thinking.” Dr. Martin R. Stuchtey, Director McKinsey Center for Business & Environment “This book is raising the bar. His vision dares to rethink the principles of the liberal and social market economy in a globalized business world.” Prof. Dr. René Schmidpeter, CBS Köln “A book worth reading and reflecting on. Onwards to an economy that works for 100% of humanity.” Michael Pirson, Associate Professor, Director Center for Humanistic Management, Fordham University and Research Fellow, Harvard University, “powerful arguments and practical guidance on how companies can become sustainable and live up to the realities of global enterprise” Michael Hilti, Hilti AG

What happens when the bottlenecks that stand between supply and demand in our culture go away and everything becomes available to everyone? “The Long Tail” is a powerful new force in our economy: the rise of the niche. As the cost of reaching consumers drops dramatically, our markets are shifting from a one-size-fits-all model of mass appeal to one of unlimited variety for unique tastes. From supermarket shelves to advertising agencies, the ability to offer vast choice is changing everything, and causing us to rethink where our markets lie and how to get to them. Unlimited selection is revealing truths about what consumers want and how they want to get it, from DVDs at Netflix to songs on iTunes to advertising on Google. However, this is not just a virtue of online marketplaces; it is an example of an entirely new economic model for business, one that is just beginning to show its power. After a century of obsessing over the few products at the head of the demand curve, the new economics of distribution allow us to turn our focus to the many more products in the tail, which collectively can create a new market as big as the one we already know. The Long Tail is really about the economics of abundance. New efficiencies in distribution, manufacturing, and marketing are essentially resetting the definition of what’s commercially viable across the board. If the 20th century was about hits, the 21st will be equally about niches.

An extraordinary confluence of forces stemming from automation and digital technologies is transforming both the world of work and the ways we educate current and future employees to contribute productively to the workplace. The Great Skills Gap opens with the premise that the exploding scope and pace of technological innovation in the digital age is fast transforming the fundamental nature of work. Due to these developments, the skills and preparation that employers need from their talent pool are shifting. The accelerated pace of evolution and disruption in the competitive landscape demands that business leaders be not only technically proficient, but also exceptionally agile in their capacity to think and act creatively and quickly learn new skills. This book explores how these transformative forces are—should be—driving innovations in how colleges and universities prepare students for their careers. Focused on the impact of this confluence of forces at the nexus of work and higher education, the book’s contributors—an illustrious group of leading employers—answer profound questions about how business and higher education can best collaborate in support of the twenty-first century workforce.
Interconnecting the concepts of sustainability, innovation and transformation, this book explains how organizations have successfully transformed themselves and wider society to foster a more sustainable future, and identifies the obstacles and challenges along the way. Part of the Principles of Responsible Management Education (PRME) series, the book presents a strong voice for meeting sustainability challenges through transformative change in a globalized world through business education and practice. A transition to a more sustainable way of doing business can only be attained by combining technology with profound system innovations and lifestyle changes. The chapters in the book, each written by a strong and well-recognized team of authors, inform you about a new partnership between sustainability, innovation, and transformation that includes the global society (big world), the biosphere (small planet), and also requires a deep mind shift. The book presents cases from business (including Ikea and Eataly) and other service networks including the Base of the Pyramid (BoP), and illustrates how these organizations have themselves for a sustainable future, and themselves for new business models. This book is where research meets real-world business and societal practice. The chapters are grounded in business research, specifically the interdependencies between sustainability, innovation, and transformation, which makes for a robust basis for describing, explaining, and understanding the complex challenges faced by business and society in the 21st century. The book is intended for graduate- and postgraduate-level students and executive education with implications for practitioners. Furthermore, it contributes to multidisciplinary research in the field of interaction between business and society with a view to extending the firm-centric view to encompass a broader, systemic, and dynamic understanding of business and societal transformation.

We are in the midst of an artificial intelligence revolution. AI is now driving our cars, running our factories, and winning our game shows. There are many opportunities to take advantage of this nascent technology, but these opportunities require a knowledge of what AI is and how it can solve your problems. The Future of Business is your guide to the revolution. It will explain what AI is, where it came from, and how it can be used to solve a wide array of problems.

"It is an undeniable fact that corporations participate in human rights abuses throughout the world. Yet there is disagreement among scholars, politicians and business actors about the best approaches to preventing and addressing those abuses. Is it feasible to adopt a new global treaty to address the human rights impacts of business operations? This book explores the potential adoption of a treaty on business and human rights, first proposed by Ecuador and South Africa. Would such a treaty be practicable and what should its content be? Should it regulate direct corporate obligations or extraterritorial obligations? How can experiences of other international legal regimes and developments in regional systems inform the global debate on business and human rights?"--Back cover.

How the world's most influential companies are building business strategies that tackle the biggest global challenges. Today's business landscape is changing in fundamental ways: Natural resources are growing ever more expensive. New consumer expectations about transparency and changing values of life. The rise of emerging economies creates vast market opportunities for companies—and better living standards for hundreds of millions. In Sustainable Excellence, Aron Cramer and Zachary Karabell tell the stories of the companies who are transforming themselves by responding to these paradigm shifts and in the process shaping the future. From their work with these Global 1000 companies, Cramer and Karabell know firsthand how business can successfully grapple with big-picture issues like resource scarcity, supply chain complexities, and the diverse expectations of government and the public. In Sustainable Excellence, they tell the story of how Coca-Cola and Greenpeace colluded on a refrigerator that fights climate change. They show how companies like Best Buy and Nike are transforming the very products they sell to deliver more value to consumers with less waste. They recount how GE and Google created an innovative partnership that is developing "smart grids" that radically reduce energy use. And they show how business leaders like Starbucks' founder and CEO Howard Schultz put sustainable excellence at the center of his company's business strategy. Through these and other fascinating stories, Sustainable Excellence makes the case for a different way of doing business—one that will define both business success and economic vitality in the 21st century.

Tomorrow’s customers need to be targeted today! With emerging technology transforming customer expectations, it’s more important than ever to equip a laser focus on delivering the experience companies provide their customers. In The Customer of the Future, customer experience futurist Blake Morgan outlines ten easy-to-follow customer experience guidelines that integrate emerging technologies with effective strategies to combat disconnected processes, silo mentalities, and a lack of buyer perspective. Tomorrow’s customers will insist on experiencing the whole story of their interactions with your business. Companies that fail to meet their expectations are being proactively deselected by justifiably proclaiming that customer experience is a priority but by embedding a customer focus into every aspect of their operations. They’ll understand how emerging technologies like artificial intelligence (AI), automation, and analytics are changing the game and craft a strategy to integrate them into their products and processes. The Customer of the Future explains how today’s customers are already demanding frictionless, personalized, on-demand experiences from their products and services - and companies that don’t adapt to these new expectations won’t last. This book prepares your organization for these increasing demands by helping you do the following: Learn the ten defining strategies for a customer experience-focused company. Implement new techniques to shift the entire company from being product-focused to being customer-focused. Gain insights through case studies and examples on how the world’s most innovative companies are offering new and compelling customer experiences. Craft a leadership development and culture plan to create lasting change at your organization.

Coping with the Future has been written in response to widespread international awareness that the future is not predictable. In political and economic terms, we are in unknown territory, with daily developments around Brexit and the Trump Presidency, and “Kodak moments” in business. On the other hand, business leaders demand certainty, which is not available. This book redefines the nature of modern business. In contrast to recent trends, it has a focus on human-centred manufacturing and on decision-making which goes beyond a focus on stock market profit. The liberal capitalism of the USA and the UK is not the answer to the variety of socio-economic challenges the world faces today. Business is not just about managers, but requires participation and engagement by workers. Since the financial crash of 2008, there has been much talk about the need for fresh approaches to business, but little has changed. This book pulls together current research and practice and poses new questions based on case studies. There is no one simple best way, but an uncertain future can be addressed, drawing on diverse policy, experience and cases. The book addresses an intended audience in business and universities, including business schools, around the world. The debate takes a broader approach, involving research in the social sciences and approaches from philosophy. The world has always been unpredictable, but we have allowed ourselves to be comforted by convenient myths. It is time to wake up.

A simple, powerful idea that’s reinventing the way smart, adaptive companies do business. Most businesses follow the same basic formula: create a product or service, sell it, and collect money. What Lisa Gansky calls “Mesh” businesses throw this model out the window. Instead, these companies use social media, wireless networks, and data crunched from every available source to provide people with goods and services at the exact moment they need them, without the burden and expense of owning them outright. The Mesh gives companies a better understanding of what customers really want. Already, hundreds of successful Mesh companies are redefining how we interact with the people, goods, services in our lives. These businesses are easier to start and spreading like wildfire, from bike sharing and home exchanges to peer-to-peer lending, energy cooperatives, and open source design. Consider: • ZipCar profits from streamlined car sharing • Kickstarter connects artists with funding from enthusiastic supporters • Music Gym makes finding a recording studio as easy as joining a gym The Mesh reveals the next wave of information-enabled commerce, showing readers how to plug in and profit.

One of the most profound changes in business and society is the emergence of the post-Millennial generation, Gen Z. While every new generation has faced its share of disruption in technology, economics, politics and society, no other generation in the history of mankind has had the ability to connect every human being on the planet to each other and in the process to provide the opportunity for each person to be fully educated, socially and economically engaged. What might this mean for business, markets, and educational institutions in the future? In this revolutionary new book, The Gen Z Effect: The Six Forces Shaping the Future of Business, authors Tom Koulopoulos and Dan Keldsen delve into a vision of the future where disruptive invention and reinvention is the acknowledged norm, touching almost every aspect of how we work, live and play. From radical new approaches to marketing and manufacturing to the potential obliteration of intellectual property and the shift to mass innovation, The Gen Z Effect offers unique snapshots of different aspects of a future in which the very tenets of reality are undergoing deep and vital transformations. The book is organized into three sections covering transformations in life and society, industries, and business, and presents holistic future scenarios that encourage strategic thinking about what lies beyond the hype.

Industrial Revolution 4.0 provides both opportunities and challenges to all entrepreneurs to grow their business. Laurie Bassi and her coauthors show that despite the dispiriting headlines, we are entering a more hopeful economic age. The authors call it the "Worthiness Era." In and in the good guys are poised to win. Good Company explains how this new era results from a convergence of forces, ranging from the explosion of online information sharing to the emergence of the ethical consumer and the arrival of civic-minded Millennials. Across the globe, people are choosing the companies in their lives in the same way they choose the guests they invite into their homes. They are demanding that companies be "good company." Proof is in the numbers. The authors created the Good Company Index to take a systematic look at Fortune 100 companies' records as employers, sellers, and stewards of society and the planet. The results were clear: worthiness pays off. Companies in the same industry with higher scores on the index—that is, companies that have behaved better—outperformed their peers in the stock market. And this is not some academic exercise: the authors have used principles of the index at their own investment firm to deliver market-beating results. Using a host of real-world examples, Bassi and company explain each aspect of corporate worthiness and describe how you can apply these principles to your own business. This detailed guide will help you determine who the good guys are—those companies that are worthy of your time, your loyalty, and your money.

Few crises in modern history have so completely disrupted every aspect of daily life as has the Covid-19 pandemic. What began as a small medical ripple in Wuhan, China, a city many of us had never heard of, quickly erupted into a tsunami of epic proportions. And, for the first time in recorded history, every wheel, cog and gear in the global retail industry ground to a virtual halt. From two-time, international best-selling author and futurist Doug Stephens, Resurrecting Retail is not just a riveting story of the unprecedented crash of an industry during this time of crisis but a roadmap for its rebirth. Metulously researched in real time from inside the crisis, Resurrecting Retail provides a comprehensive and surprising vision of how Covid-19 will reshape every aspect of consumer life, including the very essence of why we shop. Above all, Resurrecting Retail provides an inspirational and actionable future vision for any business leader looking not only to survive but to thrive in a very different looking post-pandemic retail world.

WTF? can be an expression of amazement, an expression of dismay. In today's economy, we have far too much dismay along with our amazement, and technology bears some of the blame. In this combination of memoir, business strategy guide, and call to action, Tim O'Reilly, Silicon Valley's leading intellectual and the founder of O'Reilly Media, explores the upside and the potential downsides of today's WTF? technologies. What is the future when an increasing number of jobs can be performed by intelligent machines instead of people, or only a few people in partnership with those machines? What happens to our existing workers and to the companies that depend on their purchasing power? Is income inequality and unemployment an inevitable consequence of technological advancement, or are there paths to a better future? What will happen to business when technology-enabled networks and marketplaces are better at deploying talent than traditional companies? How should companies organize themselves to take advantage of these new tools? What's the future of education when on-demand learning outperforms traditional institutions? How can individuals continue to adapt and retrain? Will the fundamental social safety nets of the developed world survive the transition, and if not, what will replace them? O'Reilly is "the man who can really take control of a whole industry happen," according to Eric Schmidt, Executive Chairman of Alphabet (Google.) His genius over the past four decades has been to identify and to help shape our response to emerging technologies with world shaking potential—the World Wide Web, Open Source Software, Web 2.0, Open Government data, the Maker Movement, Big Data, and now AI. O'Reilly shares the techniques he's used at O'Reilly Media to make sense of and predict past innovation waves and applies those same techniques to provide a framework for thinking about how today's world-spanning platforms and networks, on-demand services, and artificial intelligence are changing the nature of business, employment, finance, and technology as we know them. He explains how all the parts of modern digital businesses work together to create marketplace advantage and customer value, and why ultimately, they cannot succeed unless their ecosystem succeeds along with them. The core of the book's call to action is an exhortation to businesses to DO MORE with technology rather than just using it to cut costs and enrich their shareholders. Robots are going to take our jobs, they say. O'Reilly retorts, "Only if that's what we ask them to do! Technology is the solution to human problems, and we won't run out of work till we run out of problems." Entrepreneurs need to set their sights on how they can use big data, sensors, and AI to create amazing human experiences and the economy of the future, making us all richer in the same way the tools of the first industrial revolution did. Yes, technology can eliminate labor and make things cheaper, but at its best, we use it to do things that were previously unimaginable! What is our poverty of imagination? What are the entrepreneurial leaps that will allow us to use the technology of today to build a better future, not just a more efficient one? Whether technology brings the WTF? of wonder or the WTF? of dismay isn't inevitable. It's up to us!

Get ready to grind! Are you willing to go out there on that field with your face paint and your helmet, up against all adversity? Take it all in this season! Khalil Raymond has brought you poetry that'll get you pumped before primetime!

Despite popular belief to the contrary, entrepreneurship in the United States is dying. It has been since
before the Great Recession of 2008, and the negative trend in American entrepreneurship has been accelerated by the Covid pandemic. New firms are being started at a slower rate, are employing fewer workers, and are being formed disproportionately in just a few name brands and large chains are opening more locations. Companies such as Amazon with their “deliver everything and anything” are rapidly displacing Main Street businesses. In The New Builders, we tell the stories of the next generation of entrepreneurs -- and argue for the future of American entrepreneurship. That future lies in surprising places -- and will in particular rely on the success of women, black and brown entrepreneurs. Our country hasn’t yet even recognized the identities of the New Builders, let alone developed strategies to support them. Our misunderstanding is driven by a core misperception. Consider a “typical” American entrepreneur. Think about the entrepreneur who appears on TV, the business leader making headlines during the pandemic. Think of the type of businesses she or he is building, the college or business school they attended, the place they grew up. The image you probably conjured is that of a young, white male starting a technology business. He’s likely in Silicon Valley. Possibly New York or Boston. He’s self-confident, versed in the ins and outs of business funding and has an extensive (Ivy League?) network of peers and mentors eager to help his business thrive, grow and make millions, if not billions. You’d think entrepreneurship is thriving, and helping the United States maintain its economic power. You’d be almost completely wrong. The dominant image of an entrepreneur as a young white man starting a tech business on the coasts isn’t correct at all. Today’s American entrepreneurs, the people who drive critical parts of our economy, are more likely to be female and non-white. In fact, the number of women-owned businesses has increased 31 times between 1972 and 2018 according to the Kauffman Foundation (in 1972, women-owned businesses accounted for just 4.6% of all firms; in 2018 that figure was 40%). The fastest-growing group of female entrepreneurs are women of color, who are responsible for 64% of new women-owned businesses being created. In a few years, we believe women will make up more than half of the entrepreneurs in America. The age of the average American entrepreneur also belies conventional wisdom: It’s 42. The average age of the most successful entrepreneurs -- those in the top .01% in terms of their company’s growth in the first five years -- is 45. These are the New Builders. Women, promising high-growth immigrants, over 40. We’re failing them. And by doing so, we are failing ourselves. In this book, you’ll learn: How the definition of business success in America today has grown corporate and around the concepts of growth, size, and consumption. Why and how our collective understanding of “entrepreneurship” has dangerously narrowed. Once a broad term including people starting businesses of all types, entrepreneurship has in recent decades been describe only in terms of high-technology firms. Who are the fastest growing groups of entrepreneurs? What are they working on? What drives them? The real engine that drove Silicon Valley’s entrepreneurs. The government had a much bigger role than is widely known The extent to which entrepreneurs and small businesses are woven through our history, and the ways we have forgotten women and people of color who owned small businesses in the past. How we’re increasingly afraid to fail. The role small businesses are playing saving the wilderness, small
survive and thrive in an environment where entrepreneurs and start-ups enabled by access to technology are genuine threats. Author Steve Sammartino is widely regarded as a thought leader on the subject of technology and business, and helps companies transition from industrial-era thinking to the mindset and processes required to compete in today’s digital marketplace. The Great Fragmentation shows how technological changes such as Big Data, gamification, crowdfunding, Bitcoin, 3D printing, social media, mashup culture and artisanal production will forever change business and the way we live our lives. Examine how the digital era has altered where we work, how we work, where we live and what we do. Discover how the digital era has impacted educational systems, financial systems, social systems and policy. The Great Fragmentation introduces the idea of the digital business environment Weaving together insights from business, technology and anthropology, The Great Fragmentation provides both corporations and entrepreneurs with a playbook for the future of work, life and business in the digital era.

Shaping the Future of Work lays out a comprehensive strategy for changing the course the American economy and employment system have been on for the past 30 years. The goal is to create more productive businesses that also provide good jobs and careers and by doing so build a more inclusive economy and broadly shared prosperity. This will require workers to acquire new sources of bargaining power and for business, labor, government, and educators to work together to meet the challenges and opportunities facing the next generation workforce. The book reviews what worked well for average workers, families, and the economy during the era of the post-World War II Social Contract, why that contract broke down, and how, working together, we can build a new social contract suitable to today’s economy and workforce. The ideas presented here come from direct engagement with next generation workers who participated in a MIT online course devoted to the future of work and from the author’s 40 years of research and active involvement with business, government, and labor leaders over how to foster innovations in workplace practices and policies.

The globalized economy, dominated by the diffusion of innovation and social, political, and economic changes, allows people and knowledge to flow without knowing what lies ahead. As new economies emerge and technologies impose significant changes, the internationalization of markets and industries has made defining its delimitation more difficult. Competitive Drivers for Improving Future Business Performance is a conceptualized reference source that discusses the use of digital skills to manage change in volatile contexts and provides fundamental understanding of competitive advantage to guarantee superior performances. To assure this level of performance, a set of choices (drivers) must be created ensuring operational efficiency, innovative products, customer knowledge-base, and focused branding. Featuring research on topics such as consumer experience, strategic leadership, and flexible technologies, this book is ideally designed for managers, executives, entrepreneurs, academicians, consulting professionals, researchers, industry professionals, and students seeking coverage on how to improve competitive performance in an era of uncertainty.

This book examines the criticism that modern business schools face and how these obstacles have evolved throughout history. Through historical, resource, and professional school contexts, it sheds light on the operating environment of the business school and the challenges endemic to various university-based professional schools, exploring the likelihood that potential interventions will result in success or failure. Business schools are often accused of inhibiting the practice of business by producing research that is irrelevant and does not address the concerns of managers. This book investigates these accusations by outlining the historical values on which academic institutions are based, the resources and funding available today, and comparisons to other professional schools which undergo a similar level of scrutiny. This extensive coverage will help academics, administrators, faculty, and policy makers with the tools to understand the ill-will towards business schools in today’s university structure, and ultimately to deliver the benefits they provide to stakeholders.

A flurry of unprecedented events have proven that, despite what some politicians and economists may tell us, the future is not set in stone. Instead, it is constantly shaped and redefined by the decisions of individuals and organizations. In light of this uncertainty, The Future Starts Now looks toward the various innovations and technologies that may shape our future. Authors Theo Priestley and Bronwyn Williams have brought together the world’s leading futurists to articulate and clarify the current trajectories in technology, economics, politics and business. This is a comprehensive history of tomorrow, exploring groundbreaking topics such as AI, privacy, education and the future of work. While the guidance, insight and predictions are fascinating for anyone curious about what the future may hold, the book also functions as an invaluable guide for business professionals looking to steer their career or their organization with foresight and confidence.
